

Roll maintenance and replacement can be a very challenging task with traditional troughing idler frames. Incorporating PPI's removable end bracket frames to high wear areas—like loading zones—can ease the job by allowing the user better access to idler rolls in a congested area.

FEATURES AND BENEFITS

- Allows for easy roll change-out which minimizes downtime
- Excellent choice for impact zones where frequent roll maintenance occurs
- Minimizes distance the belt must be lifted off the rolls for roll change-out
- Available in 20°, 35° and 45° trough angles
- Available in CEMA C, D, E, and F
