

PPI Static End Rollers provide a safe, reliable solution to exposed work zones. They are designed to eliminate the potential pinch point caused between a rotating roller and the moving conveyor belt. Entanglement of Foreign Objects and Debris (FOD) is also reduced as a result of stationary roller ends.

### **FEATURES AND BENEFITS**

- Static design eliminates pinch points between belt and roller.
- Solid oil filled double row spherical roller bearings do not require re-lubing.
- Bolts on to many present systems.
- Many shaft end details available, contact your PPI representative for details.
- Tube is machined to stringent tolerances minimizing runout.
