

PRO IDLERS

A WHOLE NEW CLASS OF IDLERS

PPI'S PERSPECTIVE

Idler specifications in the conveying industry have often dictated to manufacturers how to build an idler roll based on a load rating that decreases as belt widths increase. As the industry has evolved, these specifications have left room for more efficient designs to be developed. Old specifications have been the "norm" in the industry and have been readily accepted by consumers. At PPI we've taken our 40 plus years of conveying experience and developed the **PRO Idler** series as a reliable and economical solution.

- Tell us the **MATERIAL** you're conveying
- Tell us your **BELT WIDTH**
- Tell us your **BELT SPEED**

*based on 4' trougher spacing

IDLER SELECTION MADE EASY

PPI has pioneered a new approach to how idlers are designed into complex conveyor systems. Our team of engineers designed the **PRO Idler** Series by reviewing material weights and developed a class of idlers engineered to meet your unique conveying applications.

2 YEAR STANDARD WARRANTY

PEACE OF MIND

Rest easy knowing you're purchasing an idler that has been engineered to meet the needs of your application. PPI is backing up our engineering with a two year warranty on our **PRO Idler**.

Using **Pro Idlers** helps ensure you have the exact idler you need. In some cases traditional rating methods result in idlers being over designed for the application, costing you money. Check out these real life cost savings:

REAL EXAMPLE 1

Traditional rating = \$734,000

Pro Idler = \$543,000

REAL EXAMPLE 2

Traditional rating = \$1,100,000

Pro Idler = \$812,000
