

Obtain the material shedding characteristics of a polymer roll with the proven reliability of PPI's standard steel roll. Wear life is extended by pressing a plastic sleeve over the shell of the idler roll. In many applications, the plastic surface of the roll sheds wet sticky material that otherwise may build up on a standard steel roll.

FEATURES AND BENEFITS

- Plastic surface aids in shedding sticky material and reducing material buildup
- Extends roll life in abrasive applications
- Available in 1/4" and 1/2" thickness for 4", 5", 6", and 7" roll diameters
- 120° F maximum operating temperature
